Energy

IB Physics Content Guide

Big Ideas

- The total energy of a closed system must be constant
- Energy is neither created nor destroyed, it just changes form
- Work is done to change energy when a force is applied and the object moves in the same direction as the force

1 – Calculating Energy

I can describe and calculate kinetic energy and gravitational potential energy			
I can explain the conservation of energy and show that the total energy in a closed system is always the same			
I can interpret a scenario and set up an equality based on the energies present at different locations			
I can use the conservation of energy to solve for an unknown energy or variable in a problem			

2 – Elastic Energy and Work

I can describe and calculate elastic potential energy			
I can define and calculate the property of work			
I can calculate work when the force is at an angle to the direction of the motion			
I can equate work done on a system to the change in energy of an open system.			
I can use the work-energy theorem to solve for an unknown			

3 – Momentum, Units, and Power

I can describe the difference between elastic and non-elastic collisions			
I can calculate the amount of energy retained in a non-elastic collision			
I can derive a 'Joule' and from the fundamental units kg, m, and s.			
I can use area under the curve to calculate the work of a variable force			
I can identify situations where there is motion but no work being done			
I can calculate power from work or velocity			

Calculating Energy

KE	**Variable Symbol**	**Description**	**Unit**
$E_k = \frac{1}{2}mv^2$ $E_k = \frac{p^2}{2m}$	E_k		
	m		
	v		
	p		

GPE	**Variable Symbol**	**Description**	**Unit**
$\Delta E_p = mg\Delta h$	ΔE_p		
	m		
	g		
	Δh		

EPE	**Variable Symbol**	**Description**	**Unit**
$E_H = \frac{1}{2}k\Delta x^2$	E_H		
	k		
	Δx		

Conservation of Energy

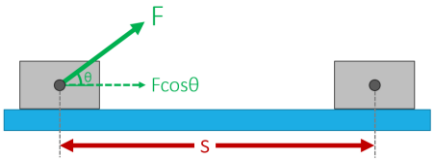
Types of Collisions

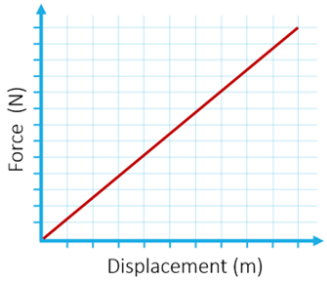
Elastic	
Inelastic	

Work and Power

	Variable Symbol	Description	Unit
$W = Fs\cos\theta$	W		
	F		
	s		
	θ		
$P = \frac{\Delta W}{\Delta t} = Fv$	P		
	t		
	v		

Calculating Work

Constant force at an angle	Varying Force	From Power
		




Examples of a force happening but no work being done:		

Work-Energy Problem Solving

Initial Energy	+	Event	=	Final Energy
